

# AUREXION TECHNOLOGIES

## UI/UX DESIGN SYSTEM & VISUAL STANDARDS

*Based on the supplied Figma website screenshots*

### 1. Design Direction

The website uses a premium enterprise-technology visual language: dark navy hero sections, clean white/light surfaces, bright blue CTAs, teal secondary accents, and selective purple highlights. The interface is spacious, highly structured, and designed to communicate trust, engineering capability, scalability, and modern technology.

### 2. Primary & Secondary Colour Palette

| Role            | Colour        | HEX               | RGB           | Recommended Usage                                    |
|-----------------|---------------|-------------------|---------------|------------------------------------------------------|
| Primary         | Bright Blue   | #2196F3           | 33, 150, 243  | Primary CTA, active navigation, links, icons         |
| Primary Dark    | Deep Navy     | #0F1830           | 15, 24, 48    | Hero/footer backgrounds, strong contrast areas       |
| Secondary       | Teal          | #14B8A6           | 20, 184, 166  | Secondary CTA, HR/people/data accents, status        |
| Accent          | Purple        | #8B5CF6           | 139, 92, 246  | Technology highlights, AI/ML, selected accents       |
| Gradient Accent | Blue → Purple | #2196F3 → #8B5CF6 | —             | Hero headline emphasis and premium visual highlights |
| Page Background | Slate 50      | #F8FAFC           | 248, 250, 252 | Main light page sections                             |
| Surface         | White         | #FFFFFF           | 255, 255, 255 | Cards, navbar, forms, content surfaces               |
| Primary Text    | Slate 900     | #0F172A           | 15, 23, 42    | Headings and high-priority text                      |
| Secondary Text  | Slate 500     | #64748B           | 100, 116, 139 | Descriptions, metadata, supporting text              |
| Border          | Slate 200     | #E2E8F0           | 226, 232, 240 | Cards, inputs, dividers                              |
| Muted Surface   | Slate 100     | #F1F5F9           | 241, 245, 249 | Tags, subtle controls, inactive states               |

### 3. Colour Usage Standards

- Use Bright Blue (#2196F3) as the primary action colour. It should be visually dominant for important CTAs.
- Use Deep Navy (#0F1830) for hero sections and high-impact dark areas. Keep body copy on dark backgrounds in a soft white rather than pure black/grey.
- Use Teal (#14B8A6) sparingly for secondary actions, category accents, status indicators, and selected service/industry cards.
- Use Purple (#8B5CF6) as an accent rather than a competing primary. It works particularly well for AI/ML and technology-related highlights.
- Use the blue-to-purple gradient only for emphasis. Avoid applying gradients to large body areas or every component.

## 4. Typography & Font Hierarchy

The screenshots show a modern geometric/sans-serif enterprise type treatment. For implementation, use Inter as the primary UI font because it closely matches the visual character and provides strong readability across desktop and mobile. If the original Figma file contains a different font token, retain the Figma font as the source of truth.

| Style         | Font                | Size     | Weight  | Line Height | Usage                     |
|---------------|---------------------|----------|---------|-------------|---------------------------|
| H1 / Hero     | Inter               | 56–64 px | 700–800 | 1.05–1.10   | Hero headline             |
| H2            | Inter               | 40–48 px | 700     | 1.10–1.20   | Major section headings    |
| H3            | Inter               | 28–32 px | 650–700 | 1.20        | Card/section titles       |
| H4            | Inter               | 20–24 px | 600–700 | 1.25        | Subsection headings       |
| Body Large    | Inter               | 18 px    | 400–500 | 1.55–1.65   | Hero/supporting copy      |
| Body          | Inter               | 16 px    | 400–500 | 1.50–1.60   | Standard content          |
| Body Small    | Inter               | 14 px    | 400–500 | 1.45–1.55   | Metadata/supporting text  |
| Button        | Inter               | 14–16 px | 600–700 | 1.20        | CTA labels                |
| Caption / Tag | Inter Mono or Inter | 11–12 px | 500–600 | 1.30        | Eyebrows, technology tags |
| Navigation    | Inter               | 14 px    | 500–600 | 1.20        | Header menu               |

## 5. Button & CTA Styles

| Type        | Background            | Text    | Border  | Radius   | Use                                          |
|-------------|-----------------------|---------|---------|----------|----------------------------------------------|
| Primary     | #2196F3               | #FFFFFF | None    | 10–12 px | Start a Project, Estimate Project, Apply Now |
| Secondary   | Transparent / #1B2744 | #E2E8F0 | #475569 | 10–12 px | Explore Services, Submit an RFP              |
| Teal        | #14B8A6               | #FFFFFF | None    | 10–12 px | Selected secondary actions                   |
| Text / Link | Transparent           | #2196F3 | None    | 0        | Explore →, inline actions                    |

Primary CTA should have a subtle shadow/glow on hover. Maintain a minimum 44×44 px interactive area for accessibility.

## 6. Form & Input Styles

- Input height: 44–48 px on desktop; maintain at least 44 px touch height on mobile.
- Border: #E2E8F0 on light surfaces; use a higher-contrast border on dark surfaces.
- Background: #FFFFFF for standard forms; #F8FAFC for subtle filled inputs.
- Radius: 8–10 px. Keep the radius consistent with buttons and cards.
- Focus state: 2 px accessible focus ring using #2196F3 with a visible offset.
- Labels: 14 px / 600; helper text: 12–14 px; error text should use a dedicated accessible red such as #DC2626.

## 7. Card & Dashboard Component Styles

| Component          | Recommended Standard                                                                                |
|--------------------|-----------------------------------------------------------------------------------------------------|
| Service Card       | White surface, 1 px #E2E8F0 border, 12–16 px radius, 24 px internal padding, subtle hover elevation |
| Feature Card       | White or dark navy surface depending on section; use one accent colour for icon/top border          |
| Job / Listing Card | White surface, 16 px radius, generous vertical spacing, clear CTA aligned to the right on desktop   |

|                         |                                                                                           |
|-------------------------|-------------------------------------------------------------------------------------------|
| Metric / Dashboard Card | White surface, 12–16 px radius, large metric value, small label, optional trend indicator |
| Dark Feature Card       | #0F1830 background, white heading, muted light text, blue/teal accent                     |
| Tag / Chip              | #F1F5F9 background, 1 px #E2E8F0 border, 6–8 px radius, 11–12 px text                     |

Cards should feel lightweight rather than heavily shadowed. Prefer borders and spacing; reserve stronger shadows for interactive/hover states.

## 8. Navigation & Menu Standards

- Desktop navbar: white/light surface on light sections and dark navy treatment over the hero where appropriate.
- Logo stays left-aligned; navigation items remain horizontally grouped in the center/right.
- Active navigation state uses a soft blue background (#E8F3FE approximately) or blue text.
- Primary header CTA remains visually dominant on the right.
- Use 14 px navigation text with 500–600 weight.
- Mobile navigation should collapse into a menu/drawer with 44 px minimum touch targets and clear active states.

## 9. Iconography Approach

- Use a consistent outline icon family with rounded geometry.
- Default icon size: 18–24 px; feature icons: 24–32 px.
- Primary icons: #2196F3; secondary icons: #14B8A6; AI/technology accents: #8B5CF6.
- Avoid mixing filled, outlined, and 3D icon styles in the same component family.
- Icons should reinforce meaning and never replace essential text labels.

## 10. Image & Illustration Direction

- Use enterprise technology imagery: cloud infrastructure, engineering teams, data platforms, AI/ML, cybersecurity, and modern business operations.
- Prefer clean, high-contrast photography with blue/navy tonal compatibility.
- Illustrations should use abstract network, grid, orbital, data-flow, and system-architecture motifs.
- Avoid generic stock imagery with overly staged poses or unrelated technology clichés.
- Dark sections can use subtle grid patterns and low-opacity technical diagrams, as shown in the supplied hero/CTA designs.

## 11. Spacing & Layout System

| Token | Value    | Usage                             |
|-------|----------|-----------------------------------|
| 4XS   | 4 px     | Icon/text micro spacing           |
| 3XS   | 8 px     | Small gaps, tag padding           |
| 2XS   | 12 px    | Control gaps                      |
| XS    | 16 px    | Standard component spacing        |
| SM    | 24 px    | Card padding / small section gaps |
| MD    | 32 px    | Component groups                  |
| LG    | 48 px    | Section internal spacing          |
| XL    | 64 px    | Major section spacing             |
| 2XL   | 80–96 px | Large desktop section padding     |
| 3XL   | 120 px   | Hero / major section spacing      |

Use an 8 px base spacing rhythm, with 4 px available for fine adjustments. Keep desktop content within a centered max-width of approximately 1200–1280 px.

## 12. Responsive Design Standards

| Breakpoint   | Target         | Layout Standard                                                    |
|--------------|----------------|--------------------------------------------------------------------|
| ≥1280 px     | Large desktop  | 12-column grid, max content width ~1280 px                         |
| 1024–1279 px | Desktop/tablet | Reduce gutters and card gaps; preserve hierarchy                   |
| 768–1023 px  | Tablet         | Switch dense 4-column areas to 2 columns                           |
| <768 px      | Mobile         | Single-column layout, collapsed navigation, full-width primary CTA |
| <480 px      | Small mobile   | Reduce H1 to ~36–40 px, tighter section spacing, stacked CTAs      |

## 13. Accessibility Considerations

- Maintain WCAG-compliant contrast for text and controls; do not rely on colour alone to communicate status.
- Use visible keyboard focus indicators on all interactive elements.
- Keep touch targets at least 44×44 px.
- Provide descriptive labels/ARIA names for icon-only controls.
- Use semantic headings in a logical H1 → H2 → H3 hierarchy.
- Provide alt text for meaningful images; mark decorative graphics as decorative.
- Ensure forms expose labels, errors, helper text, and required state clearly.

## 14. Reusable Component Standards

| Component Family | Reusable Variants                                              |
|------------------|----------------------------------------------------------------|
| Button           | Primary / Secondary / Teal / Ghost / Text / Disabled           |
| Navigation       | Desktop / Mobile / Active / Dropdown                           |
| Card             | Service / Feature / Metric / Job / Case Study / Dark           |
| Form             | Input / Select / Textarea / Checkbox / Radio / Error / Success |
| Badge            | Category / Technology / Status / Count                         |
| Section Header   | Eyebrow / Heading / Description / Optional CTA                 |
| CTA Banner       | Dark / Light / Split layout                                    |
| Icon             | Default / Active / Accent / Disabled                           |

## 15. Design Tokens — Quick Reference

| Token              | Value   |
|--------------------|---------|
| --color-primary    | #2196F3 |
| --color-secondary  | #14B8A6 |
| --color-accent     | #8B5CF6 |
| --color-navy       | #0F1830 |
| --color-background | #F8FAFC |
| --color-surface    | FFFFFF  |
| --color-text       | #0F172A |
| --color-muted      | #64748B |
| --color-border     | #E2E8F0 |
| --radius-sm        | 8 px    |
| --radius-md        | 12 px   |
| --radius-lg        | 16 px   |

|                 |         |
|-----------------|---------|
| --space-unit    | 8 px    |
| --container-max | 1280 px |

## 16. Implementation Note

The HEX values above are derived from the supplied website screenshots and the visible visual system. The strongest confirmed screen colours include #2196F3, #14B8A6, #F8FAFC, #FFFFFF and a deep navy hero treatment. Typography sizing is a UI specification based on the visible hierarchy; exact Figma font tokens should be treated as the final source of truth if the editable Figma file exposes them.
